This is an example of the new 3D RFI feature we have in SDS/2. If you have Adobe Reader or Acrobat 7.08 or later, you can navigate this 3d model.

This is a useful tool we use for RFIs and to aid in the approval process. With the use of free software, anyone can view, zoom and rotate excerpts from our model. Check out the "Views" options, the rotate and zoom tools, and especially the MODEL TREE to get an idea of how powerful this tool can be. Remember when sending faxes for RFIs was high tech?

Note: If you get the model rotated around, and want to return it to its original position, just click your left and right mouse buttons at the same time.
